Job Overview:

As an Android Engineer, you'll help us build our mobile experience that serves to strongly identify   our users. Our mobile app uses Kotlin and Jetpack Compose as well as advanced financial features of the platform. Our application is packaged with a traditional application in the Play Store.

Key Responsibilities:

• 8+ years of working experience in Android application development in Kotlin.
• Strong knowledge in Android SDK, JSON, RESTful API and integrating third-party libraries and APIs.
• Experience with Cloud engineering, Agile methodologies and continuous integration/continuous deployment (CI/CD) practices.
• Can be productive using Compose and Kotlin, even if you've worked previously with more traditional apps,
• In depth understanding of programming languages like Kotlin, Java, Jetpack Compose

- Utilizing Android Studio and Gradle for development.
- Managing dependencies with Gradle.
- Building Android Modules, SDKs, Framework is plus.
- Familiarity with RESTful APIs, JSON, and web services integration
- An understanding of mobile UI and UX principles and design patterns
- Knowledge of version control systems like Git
- Solid understanding of software development principles, including agile methodologies
- Familiar with MVVM pattern, data structures with solid OOP
- Hands on Experience with Kotlin Coroutines (Android)

Tech Stack:

Android SDK, Jetpack Compose, MVVM, Jetpack Navigation, Maven Artifacts, Multi Module App, Unit Testing (JUnit, Compose), Multithreading, Firebase Crashlytics, RemoteConfigs.

Bonus Skills

- Capable of productive and self-guided work on a remote team
- Managed the build and release process for Google Play.
- Can synthesize the big picture when thinking about technical product problems and solutions
- Familiar with GooglePlay policies for App submission
- Strong problem-solving and debugging skills
- Cloud exposure (Azure) would be an added advantage

The Skills You Bring

- Use your knowledge of testing and testability to influence better software design, promote proper software engineering and bug prevention strategies, testability and security
- Actively participate in the development process through writing and maintain application features and automated tests including unit tests, component tests, integration tests, functional tests, performance tests, scenario tests and interoperability tests
- Support the team in designing reliable, accurate tests, and in integrating them into CI/CD pipelines
- Collaborate with team members on improving team's test coverage, release velocity and production health
- Enable the team in designing and developing automation using Android Framework
