

## Job Description – Senior/Lead Snaplogic Developer

**iSteer** is a global technology services and consulting organization helping enterprises accelerate digital transformation through Enterprise Integration, Automation, Data & AI, Cloud, Product Engineering, and Managed Services. With a presence across North America, APAC, the Middle East, and India, iSteer partners with leading enterprises to solve complex business challenges through innovative technology solutions.

### Role Overview

iSteer is looking for a strong, senior, and highly independent resource who can take complete ownership of SnapLogic requirements. This is not purely a development role; the candidate should be capable of handling both solution architecture and hands-on SnapLogic development.

### Key Responsibilities

- Independently own and drive SnapLogic integration requirements end-to-end.
- Work directly with the customer teams as the primary SnapLogic technical point of contact.
- Understand business and technical requirements and translate them into appropriate integration solutions.
- Design and define the integration architecture and overall solution approach.
- Develop, test, troubleshoot, deploy, and support SnapLogic pipelines and interfaces.
- Provide architectural guidance and recommend SnapLogic best practices.
- Work on integrations involving Workday and multiple enterprise/vendor applications.
- Support the customer's onboarding and integration initiatives related to the Xactly application.
- Support additional interfaces as the customer expands the use of SnapLogic as their middleware/integration platform.
- Take complete ownership of SnapLogic-related technical issues and drive them through resolution.
- Communicate effectively with customer stakeholders and work with minimal supervision

### Required Experience

- **7+ years of hands-on SnapLogic development and technical leadership experience.**
- Proven experience designing and implementing enterprise integration solutions using the **SnapLogic Intelligent Integration Platform.**
- Strong experience with application, data, and API integrations across enterprise systems.
- Experience developing and managing **SnapLogic pipelines, Ultra Tasks, Scheduled Tasks, and API-triggered integrations.**
- Experience leading integration projects and mentoring development teams.
- Hands-on experience with cloud-based and hybrid integration architectures.
- Experience building data pipelines, ETL/ELT workflows, and enterprise application integrations.
- The ideal candidate should therefore operate more like a Senior SnapLogic Developer / Technical Lead, with the ability to independently architect solutions while also being hands-on with development and troubleshooting.
- Strong, hands-on SnapLogic experience and are comfortable independently handling architecture, development, and direct customer interactions.

### Education

Bachelor's or Master's degree in Computer Science, Information Technology, Software Engineering, or a related field (B.E./B.Tech, M.Tech, MCA, or M.Sc. in Computer Science/Information Technology).
